Brick Sidewalk Repair on Carrillo Street Completed Ahead of Schedule

Uplifted sidewalks and uneven bricks caused by tree roots can be uncomfortable to walk on. This Measure C Maintenance and Repair Project was part of the City’s ongoing efforts to support a clean, safe, and vibrant Downtown business district.

The Project repaired approximately 2,250 square feet of brick sidewalks uplifted by tree roots between State Street and Anacapa Street on East Carrillo Street. Public Works staff worked with adjacent businesses to minimize impacts to the businesses, pedestrians, and the public on-street parking supply. This included maintaining access to adjacent businesses at all times. Now complete, the Project has created a much smoother walking surface, improving pedestrian safety and convenience in the Downtown core.
