Upcoming Pavement Maintenance

The Fiscal Year 2019-A Pavement Maintenance Project will remove and replace failed sections of asphalt pavement, followed by crack sealing and slurry sealing.

The Project will be completed in two phases. Phase 1 consists of minor concrete construction, including installation of curb ramps and replacement of damaged sidewalks, curbs, and gutters, primarily those adjacent to streets designated for slurry seal (though not all areas undergoing concrete construction will receive slurry treatment). Phase 2 is the placement of the slurry seal.

The streets scheduled for work are found [here](#). Phase 1 will take place December 2018 to March 2019. Phase 2 will occur in April 2019.

The Project also includes slurry sealing of the City parking lots at Helena Street, the Waterfront, the Railroad Depot, and new asphalt at the Garden Street lot.

In addition to a Measure C contribution of $6,000,000, the Project is funded by Measure A, Waterfront funds, and Downtown Parking funds.

Some road closures should be expected to minimize construction duration and to ensure the least disruption to normal traffic flow. No-parking signs will be posted at least 72 hours prior to construction.
